

# LU09a - Statische Webseiten veröffentlichen

## Github-Pages

Das Deployment von statischen Webseiten via Github-Pages ist denkbar einfach. Dazu müssen nur unter „Settings“ > „Pages“ die Source und der Branch ausgewählt werden.

The screenshot shows the GitHub Settings page for GitHub Pages. The left sidebar contains navigation options: Actions, Projects, Wiki, Security and quality, Insights, and Settings. The main content area is titled 'GitHub Pages' and includes a 'General' section with the site URL and a 'Build and deployment' section with source and branch settings.

**General**

GitHub Pages is designed to host your personal, organization, or project pages from a GitHub repository.

Your site is live at <https://alexanderpeter.github.io/ffit-lu08-club-accounting-website/>  
Last deployed by [AlexanderPeter](#) 2 weeks ago

[Visit site](#) [Unpublish site](#)

**Build and deployment**

**Source**

Deploy from a branch

**Branch**

Your GitHub Pages site is currently being built from the `master` branch. [Learn more about configuring the publishing source for your site.](#)

`master` `/ (root)` [Save](#)

Learn how to [add a Jekyll theme](#) to your site.

Your site was last deployed to the `github-pages` environment by the `pages build and deployment` workflow. [Learn more about deploying to GitHub Pages using custom workflows](#)

Beispiel:

- Repository: <https://github.com/AlexanderPeter/ffit-lu08-club-accounting-website>
- Github-Pages: <https://alexanderpeter.github.io/ffit-lu08-club-accounting-website/>

Es ist auch möglich die Applikation in der Pipeline zu bauen und die resultierenden Seiten dann zu deployen.

## AWS-Umgebung
