

LU01.A02 - References and anchors

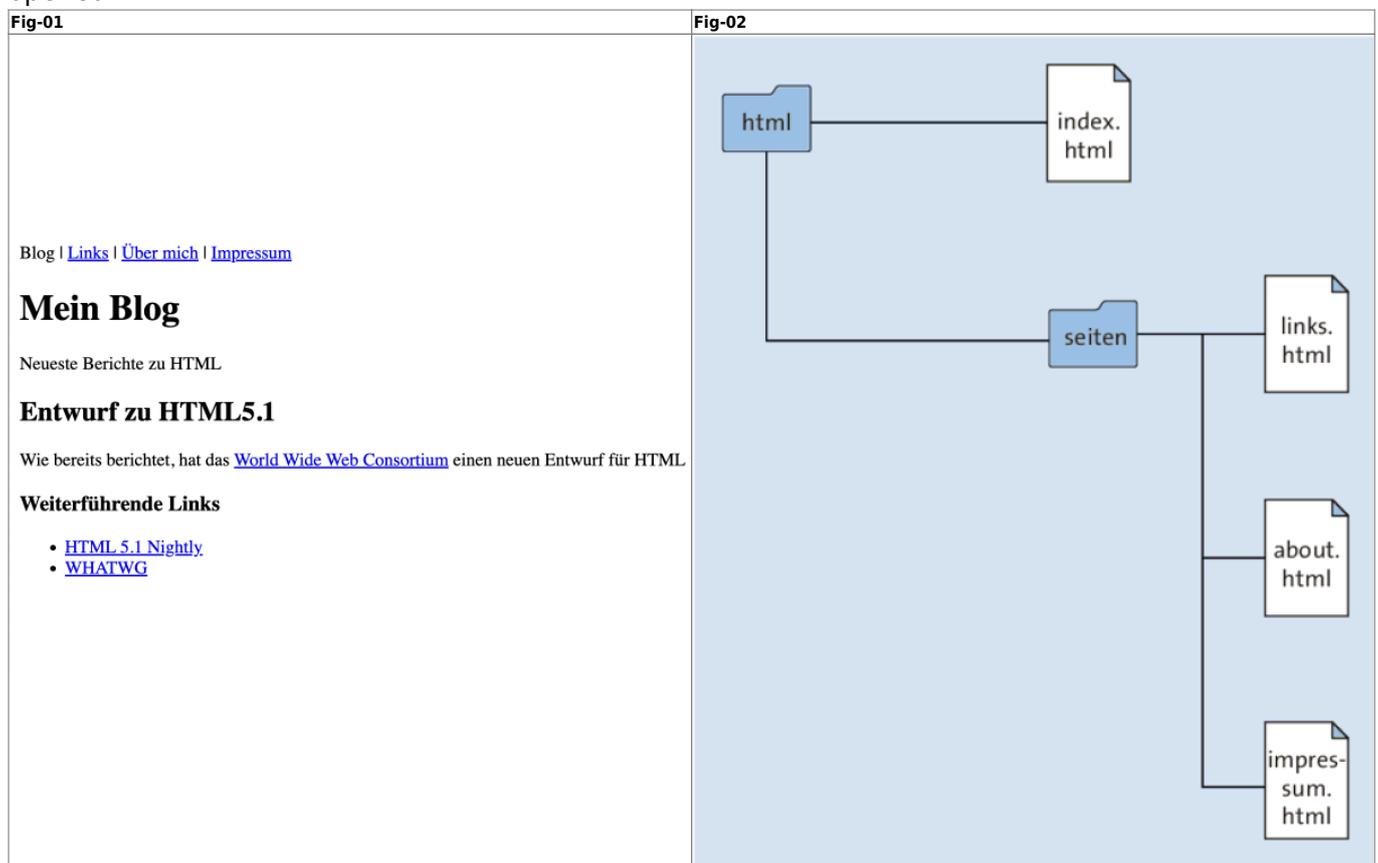

Task 1: Create a simple blog

Initial situation

You want to create a simple blog (see

template

) with internal and external links. The top-level navigation of the blog is shown in Fig-01 and the directory structure with the internal pages is shown in Fig-02. You can also write your own text for the blog. The external links are www.w3.org, www.w3.org/html/wg/drafts/html/master/ and www.whatwg.org. When selecting an external link, a new tab or a new browser should always be opened.

Task

1. Create the blog according to the specifications in the initial situation. (Create directory, link documents correctly)
2. Check the links so that they display the pages correctly.

Task 2: Simple blog with table of contents

Initial situation

Based on task 1, expand the blog (index.html) with a table of contents (at least three chapters). The text in the chapters is not decisive (text generator as placeholder). In addition, create a return anchor (e.g. to the table of contents)

Task

1. Create the table of contents according to the specifications in the starting position.
2. Check that the anchors are working correctly.
