

# LU01.A02 - References and anchors

## Task 1: Create a simple blog

### Initial situation

You want to create a simple blog (see

template

) with internal and external links. The top-level navigation of the blog is shown in Fig-01 and the directory structure with the internal pages is shown in Fig-02. You can also write your own text for the blog. The external links are [www.w3.org](http://www.w3.org), [www.w3.org/html/wg/drafts/html/master/](http://www.w3.org/html/wg/drafts/html/master/) and [www.whatwg.org](http://www.whatwg.org). When selecting an external link, a new tab or a new browser should always be opened.

### Task

1. Create the blog according to the specifications in the initial situation. (Create directory, link documents correctly)
2. Check the links so that they display the pages correctly.

## Task 2: Simple blog with table of contents

### Initial situation

Based on task 1, expand the blog (index.html) with a table of contents (at least three chapters). The text in the chapters is not decisive (text generator as placeholder). In addition, create a return anchor (e.g. to the table of contents)

### Task

1. Create the table of contents according to the specifications in the starting position.
2. Check that the anchors are working correctly.
