

LU04.A01 - Display

Task

1. Describe the difference between block and inline elements in HTML and give an example of a block element and an inline element.
2. Change the display behaviour of an element with the CSS property „display“ from „block“ to „inline“ and vice versa. Explain how the layout of the element changes.

Framework conditions

What	Description
Product:	Solutions recorded in writing
Time:	10 min.
Social form:	Individual or partner work
