

# LU06 - Assignment: Swiss Regions

## Prerequisites

- **Working method:** Group work (same group as in LU05)
- **Resources:** Your own database from LU05.
- **Time:** approx. 30 minutes

## Background

We would like to **record, amend and delete municipalities and waste incineration plants (KVA) in the canton of Zurich** in our database.

Your tables: **kanton**, **kva**, **gemeinde**.

**Reminder:** The canton has no AUTO\_INCREMENT ID – 'kantons\_kennzeichen' is the primary key and must always be specified manually during an INSERT.

## Task:

### 1. Insert records

**kva** (columns: name, ort)

```
KVA Hagenholz, Zürich
KVA Dietikon (Limeco), Dietikon
KVA Hinwil, Hinwil
KVA Horgen, Horgen
KVA Winterthur, Winterthur
```

**gemeinde** (Columns: name, einwohnerzahl, plz, kantons\_kennzeichen, anlage\_id)

```
('Uster', 36000, '8610', 'ZH', 3),
('Dietikon', 28000, '8953', 'ZH', 2),
('Horgen', 22000, '8810', 'ZH', 4),
('Winterthur', 114000, '8400', 'ZH', 5),
```

```
('Wetzikon', 25000, '8620', 'ZH', 3);
```

Adjust the 'kantons\_kennzeichen' to match the value you actually created for 'kanton' (e.g. 'ZH').  
Adjust the 'anlage\_id' to match the order in which you inserted the KVA records.

## 2. Deliberately violate the constraint

Try entering the same canton **a second time** ('kantons\_kennzeichen' is the primary key). Read the error message.

## 3. Modify data

1. Uster has grown – change the population to **36,800**.
2. Wetzikon is being assigned a new postcode **and** an updated population figure – change the postcode to "8623" **and** population to 25,400 in a single command.

Filter by the name of the municipality, e.g. "WHERE name = 'Uster' ". Use SELECT beforehand to check how many rows are affected.

## 4. Delete data

1. Horgen is listed twice by mistake – delete the specific record using the name.
2. All municipalities assigned to the Hinwil waste-to-energy plant are being re-entered – delete all municipalities with an anlage\_id of 3 in one go.

Remember to carry out a dry run with SELECT before every DELETE.
