Assignment

After successfully being able to manage 2-dimensional-arrays with the v-for directive, it is time to take next challenge: the combined usage of v-for and v-if.

Though the assigment is to dispay the pictures only, when they are likes. For that we need to check the status, it they are **OK** we display the image of the dish, if they are **NOK** we simply give out the name and the statu of the dish, but no image of it.

1. Download the provided Vue-Script and copy-paste it to your W3School-workspace.
2. Save it with a suitable name e.g. LU05.s17
3. Right after the image-tag add a first **div** container:
    - with v-if statement that checks the status OK
    - with an area with the text *I love* and the name of the dish
    - mind the colour-change of the text to red
    - with a closing div
4. Execute the the script and proceed only when your script works properly.
5. Create a second **div** container with
    - v-else
    - area with the text *I don't like* and the name of the dish
    - mind the color change of the text to green
    - closing div

Solution

[Lösung]

Vocabulary

English	German
to appease	Glühbirne
