LU05.S01 - Vue Directives - Control questions

Notes

- You are free to use ChatGPT to summarize the content.
- Regardless which additional means you use, comrehending the content is crucial to developing your competence.

1. Explain what is meant by the term directives

• *directives* are special HTML-attributes which are helping us to programm website more easyly and reactively.

2. Give some concrete examples for directives and explain them briefly

Directive	Details
v-bind	Connects the HTML-attributes tags regarding data with the VUE Framework
v-on	Connects the HTML-attributes tags regarding events i.e. Mausclick, etc. with VUE
	Erstellt HTML tags, die auf Bedingungen aufbauen. v -if wird häufig auch in Verbindung mit v -else-if und v -else angewendet.
v-show	Specific v-if statement that only visible if a condition is fulfilled.
v-for	Creates a list of tags, which are sourced by a VUE array
	There are more directives for which we unfortunately have not the time to explore.

3. What are the major advantages of using directives?

• Programming responsive websites is possible without JavaScript knowlege by outsourcing the JS-functionalities to HTML. That means that HTML is augmented by VUE in order to do it without IS.

Vocabulary

English	German
augmented	ergänzt, verbessert
