

# LU05.S12 - v-show simple applied to texts

## Hints

- Download the file and copy the content into the code area of the W3School on the left hand side of the coding window.
- You can execute the code by pressing the *run* button
- The result will be presented in the right hand side of the window.

## Assignment

Using the v-show directive by manipulate the value of the showDiv.

Codesolution of v-show simple

The screenshot shows a code editor on the left and a browser's developer tools on the right. The code in the editor includes a Vue.js application with a `showDiv` property that can be set to `true`, `false`, or `0`. The `v-show` directive is used to conditionally display a `div` based on this property. The browser's Elements panel shows the rendered HTML, where the `div` with `style="display: none;"` is highlighted, indicating it is currently hidden.
