

LU06.A01 - Personal data

Create an HTML page with a form for entering personal data.

GitHub Classroom Assignment

How to proceed

1. Accept the GitHub Classroom Assignment for the LU06.
2. Clone the repository.
3. Create the HTML web page in the file `personal.html`.
4. Validate your HTML code for compliance with the standards.
5. Push your solution into the repository.

Form

Your form must fulfil the following requirements:

- Destination address: <https://it.bzz.ch/demo/formdata/index.php>
- Input fields:
 - First name
 - Last name
 - Place of residence
- Buttons:
 - Send
 - Reset

Test

You can test your form by submitting the data. The response from the server must look like this:

```
HTTP-Methode:  POST
Eingabefelder:
givenname    =  a
surname      =  b
residence    =  c
```
