LU05a - How to test an exposed Service in K8s

Goals

1. I'm able to query relevant information on pods and services in a K8s cluster.
2. I'm able to expose a deployment with a K8s service.
3. I'm able to program Bash-Scripts to automate/simplify process steps.
4. I'm able to remove a service.
5. I can suggest and implement at least one measure when an error message appears.

Basics

1. Read the introductory articles in `05b/01_Intro/*` located in your repository.

Exercises

1. Work on `05b/02_Exercises/01_ to 02_Exercise.sh` located in your repository.
2. If an error occurs, read the message carefully, think of a solution and implement it.
