

00 - Grundlagen

Diese Codingstandards basieren auf PEP 8 (<https://peps.python.org/pep-0008/>). Sie gelten für alle Python-skripts, die Sie im Rahmen des Unterrichts erstellen.

„The first thing I would say is that when you write a program, think of it primarily as a work of literature. You're trying to write something that human beings are going to read. Don't think of it primarily as something a computer is going to follow. The more effective you are at making your program readable, the more effective it's going to be: You'll understand it today, you'll understand it next week, and your successors who are going to maintain and modify it will understand it.“

 Donald E. Knuth

Symbole

	Zwingende Vorschriften
	Empfehlungen
	Begründete Ausnahmen
