

LU02a - Simple Form

```
import { useState } from 'react';

export default function Formular() {
  const [firstName, setFirstName] = useState('');
  const [lastName, setLastName] = useState('');

  const handleSubmit = (e) => {
    e.preventDefault();
    alert(`Gespeicherter Name: ${name}`);
  };

  return (
    <form onSubmit={handleSubmit}>
      <label>
        Firstname:
        <input
          type="text"
          value={firstName}
          onChange={(e) => setFirstName(e.target.value)}
        />
      </label>
      <label>
        Lastname:
        <input
          type="text"
          value={lastName}
          onChange={(e) => setLastName(e.target.value)}
        />
      </label>
      <button type="submit">Absenden</button>
    </form>
  );
}
```
