

# LU02.L02 - Answers: CRUD and SQL

1. Explain what is behind the so-called CRUD operations and add an example.

- CRUD is an acronym for Create, Read, Update, and Delete and represents the four fundamental operations for managing data in a database.
- CRUD is a conceptual framework.
- It outlines the basic operations for data management but doesn't specify how these operations are implemented.

2. What does the acronym SQL stand for?

1. Structured Query Language
2. Standard Query Language
3. Simple Quarrel Language

3. Which of the following statements about CRUD and SQL is **not** correct?

1. The CRUD approach is a prerequisite for all types of dynamic web applications.
2. CRUD is realised in databases by SQL -statements, e.g. SELECT, CREATE, UPDATE and DELETE.
3. The CRUD approach groups SQL-operations logically.
4. CRUD is an alternative to SQL and has to be applied, if we want to build stable web pages.

4. Which of the following SQL subtypes does **not** exist? Explain the meaning of the other terms.

1. DCL = Data Control Language
2. DML = Data Manipulation Language
3. DXL
4. DDL = Data Definition Language
5. DQL = Data Query Language

## Vocabulary

| English      | German                     |
|--------------|----------------------------|
| conceptual   | abstrakt, konzeptionell    |
| to outline   | skizzieren, zusammenfassen |
| to implement | anwenden                   |
| query        | Anfrage                    |
| quarrel      | Streit, Zank               |
