

LU03.A04 - ERD: Travel DB

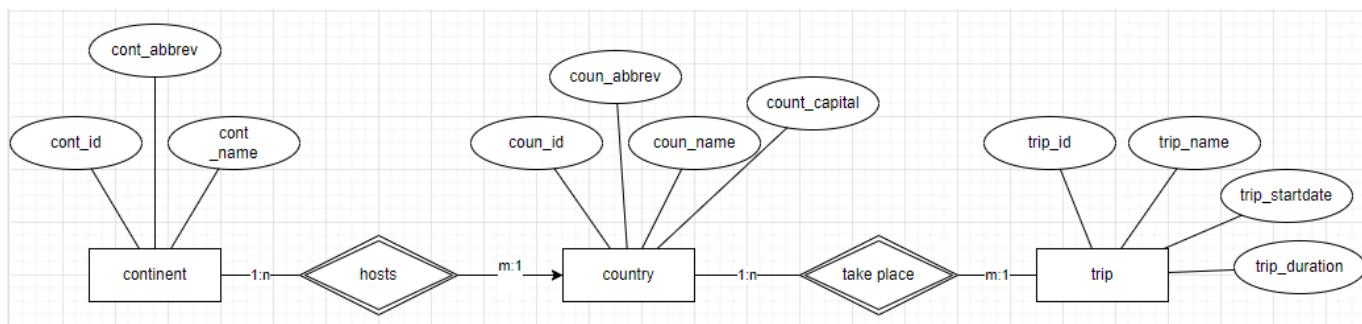

After developing our conceptional data model, the next step to establish a physical data base is shape a ERD, the Entity Relationship Diagram.

Prerequisites

- Work type: Peer
- Means of aid: only teaching materials, no use of ai.
- Timeframe: 10 Minutes
- Expected result: A Word/PDF file with an ERD that visualises the given business case.

LU03.A04 - ERD: Travel DB

Below figure of a conceptual datamodel illustrates the basic database structure of a Travel_DB. It consists of three base tables and two relations.

Task

Your assignment is to analze the given ERD (concepetual datamodel), which is in fact the last step before creating the actual db ins our Mysql database system, and draw the ERD as a logial data model. The subtasks are:

1. develop the logical datamodel (tables, attributes, data types, fk/pk) by using the Crow's Foot Notation
2. realize the realation as ralation tables (id, fk_tab1, fk_tab2, ...)
3. finalize the ERM by adding the cardinalities (1:1, 1:many, ...)
