## LU03.L01 - Choose data-types

## Task a) Choose datatypes

Which datatype would you use to store the following information? Give reason for your decision.

- product-title like trousers up to 50 characters:
  - VARCHAR(50)
  - Titles can be at the most 50 characters. A fix length makes not sense in that case. \*
    product-description up to 255 characters: \* <color #ed1c24>VARCHAR(255)
  - The description can be 255 characters, but can also be shorter. A fix length does not make sense in that case.
- stock amount:
  - INT or INTEGER
  - Floating point type is not suitable as pieces are always counted in whole numbers.
- price of each piece:
  - FLOAT(5,2) or DECIMAL(U5,2)
  - Prices have floating point
  - The length of (5,2) should be sufficient enough as trousers are usually within a price ranger of 0.99 to 999.99.
- order date:
  - DATETIME or TIMESTAMP \* <color #ed1c24>The type depends on whether we want to safe only the date, but also the time. \* <color #ed1c24>Important is, that the in this case the storage of the current time. \* <color #ed1c24>date of delivery: \* whether organical or not: \* <color #ed1c24>BOOLEAN
  - As there a only two posibilites to store a boolan data-type is the correct data-type. \*
     usage category with only one character: \* <color #ed1c24>As long as there is only one
     character to be stored the CHAR-type will work.
  - Technically the CHAR-types allows all letters, digits (as letters) and special characters.
