Case studies / Assignments

The following ERD describes a order database for a a shop.

Assignments

The general assignment is to develop DQL commands that matches the requirements below:

Assignment a: MIN

We want to know which of our products is actually the most expensive.

Assignment b: MAX

What is the lowest price for the products of the supplier with id = 12?

Assignment c: AVG

What is the average price for products of supplier 3?

Assignment d: AVG

How many orders do we currently have in our data-base system from the customer with id = 5?

Assignment e: SUM

What is the worth of the order 10255? Please note, that there are two tables involved in this select statement.

Assignment f: GROUP BY

For our anual report we need list of the orders, and the value of each, grouped by the OrderID.
