# LU05.A03 - SQL-DQL: Selects with Aggregate Functions

# Requirements

- Work type: individualTimeframe: 30 Minutes
- Means of aid:
  - only teaching materials, no websearch, no use of ai.
  - W3Schools | SQL Editor
- Expected result: Semantically and syntactically correct SQL statements according to the requirements of the case studies.

## **Case studies / Assignments**

The following ERD describes a order database for a a shop.

# **Assignments**

The general assignment is to develop DQL commands that matches the requirements below:

## A: MIN

We want to know which of our products actually the cheapest is.

#### B: MAX

What is the highest price for the products of the supplier with id = 12?

#### C: AVG

What is the average price for products of supplier 3?

## **D: COUNT**

How many orders do we currently have in our data-base system from the customer with id = 5?
