## Assignments

### A: Separate INSERT statements

Below you will find ten lines with employee data that you should insert into the 'Employees' table, but with 10 separate INSERT commands.

```
1, 'John', 'Doe', '1985-03-25', 'M', 'He/Him', '2015-01-15', 55000.00,
'Finance'
2, 'Jane', 'Smith', '1990-07-19', 'F', 'She/Her', '2017-06-10', 60000.00,
'HR'
3, 'Mike', 'Brown', '1982-11-02', 'M', 'He/Him', '2012-03-05', 75000.00,
'IT'
4, 'Sarah', 'Johnson', '1970-01-14', 'F', 'She/Her', '2020-08-22', 50000.00,

```

### B: One single INSERT statement

After inserting 10 lines of data with 10 separate SQL commands, the next step is to do the import with one single SQL commands, which is basically more compact and more efficient, than the first approach.

Insert the following 20 lines of data into the table „employees“

```
