LU05.L04 - Verwendung von **kwargs in Funktionen

```python
def user_profile(**kwargs):
    """
    Creates a formatted user profile string based on the provided keyword
arguments.

    Parameters:
        **kwargs: Variable number of keyword arguments representing user
data.

    Returns:
        str: A formatted string containing all the provided user data.
    """
    profile_str = ', '.join(f"{key.capitalize()}: {value}" for key, value in
kwargs.items())
    return profile_str

if __name__ == '__main__':
    # Teste deine Funktion
    print(user_profile(name="Alice", age=30))  # Erwarteter Output: "Name:
Alice, Age: 30"
```
